## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1-6, in the recitation of the term "LSG", it is ambiguous as to the meanings of the term. For example, Zhou S *et al.* (J Cardiovasc Electrophysiol 2001 Sep;12(9):1068-73, see abstract) uses the term to mean left stellate ganglion, or Larsson A *et al.* (Scand J Immunol 2001 Sep;54(3):328-34, see abstract) uses the term to mean lip salivary gland. Clarification of the term in the claims is needed.

Regarding claims 1-5, in the recitation of the phrase "*sample of cells, tissue, or bodily fluids*," the applicant fails to particularly point out the exact source of the cells, tissues, or bodily fluid, from which the measurement of the LSG levels are to take place. Clarification of this phrase is required.

Regarding claims 4-5, in the recitation of the term "*periodically*," it is unclear whether this measurement is scheduled daily, weekly, or monthly, therefore, it is imprecise as to how often this procedure is to take place. Clarification of this term is required.

### ***Claim Rejections - 35 USC § 102***

Art Unit: 1642

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Cohen *et al.* Cohen *et al.* teaches the use of LU103, a protein found in the lung, for the detection, diagnosis, staging, monitoring, prognosticating, prevention or treatment, and determination of individuals predisposed to conditions such as lung cancer (see abstract). The Cohen *et al.* reference teaches a protein that is identical to LSG, as determined by sequence homology, but is identified by a different name. In addition, the methods described in the current application, are anticipated by Cohen *et al.*

3. No claims are allowed.
